Standard Pump has designed a range of unique, preconfigured DEF Pump Packages that are engineered to transfer AdBlue (AUS32) Diesel Exhaust Fluid (DEF) directly from barrels, drums and Intermediate Bulk Containers (IBC). Pump Packages are UL and CE listed to meet stringent North American (UL) and European (CE) safety standards. Packages include sealless pump, variable speed motor, dispensing nozzle (manual or auto-shut off), compatible hose and barrel adapter. Motor drives are available in pneumatic or electric (110 or 230v) versions to include a speed control option that ensures proper flow rate and optimum pump performance. The sealless design allows the pump to be run dry or back pressure applied without damage to the pump or motor. The flow meter packages allow precise measurement and accurate dispensing of DEF without overfill.
